

A home that knows you're home.

We make the home you already have smart. Lights, fans, water motor and more, from your phone, on timers or all by themselves. Your wall switches keep working.

1

We visit

We look at your switchboards and wiring, and ask how you live day to day.

2

We fit it

Our team fits small smart modules behind your existing switches. No new switchboards.

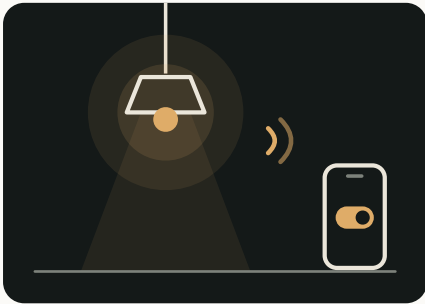

3

We hand it over

Everything set up on your phone, with scenes, and a walkthrough for the family.

What we can make smart

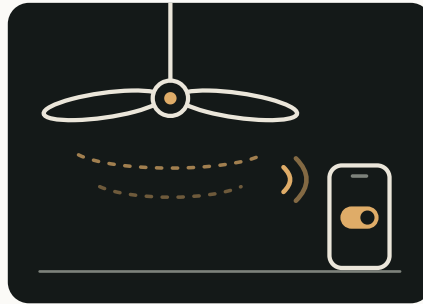

Start with one thing or do the whole home. Your wall switches keep working either way.

Lights

Every light on your phone, on timers and in scenes. Your wall switches keep working.

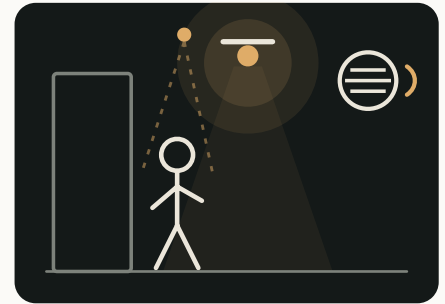

In bed and forgot the hall light? Switch it off from your phone.

Fans and exhaust

Fans and exhaust fans from your phone or on a timer, and fan speed on compatible fans.

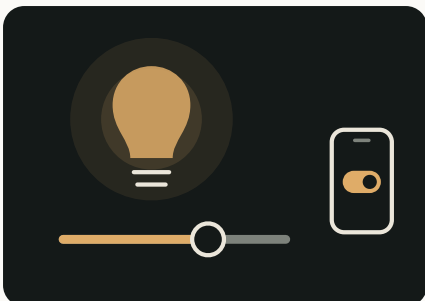

Set the bedroom fan to turn off at 4 am, when it gets cool.

Lights that turn on by themselves

Bathrooms, passages and stairs light up when you walk in and switch off after you leave.

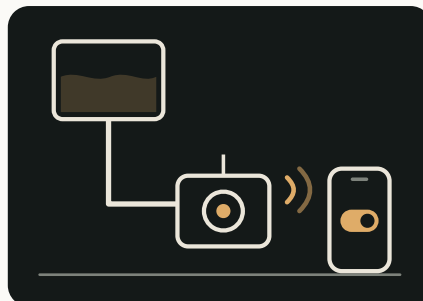

At night the bathroom light and exhaust come on as you walk in. No hunting for the switch.

Dimmable lighting

Set the brightness of your lights for dinner, a movie or a late night.

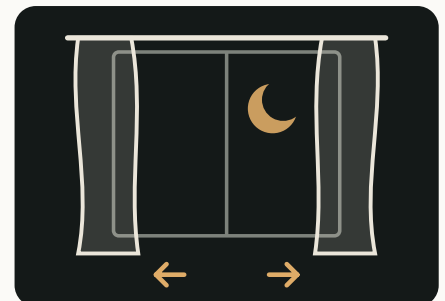

Dim the living room for movie night with one tap.

Water motor

Switch your water motor on or off from anywhere, with timers.

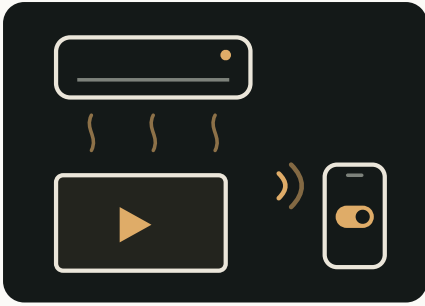

Start the motor from upstairs. No more running down to the motor switch.

Curtains

Open and close curtains from your phone or on a schedule.

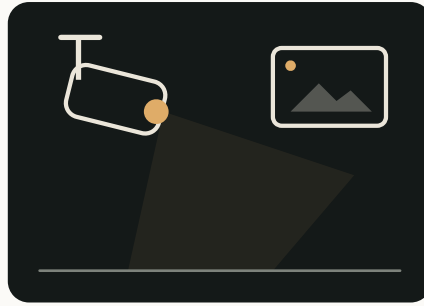

Curtains open by themselves at 7 am.

AC and TV

Control your AC and TV from your phone instead of hunting for remotes.

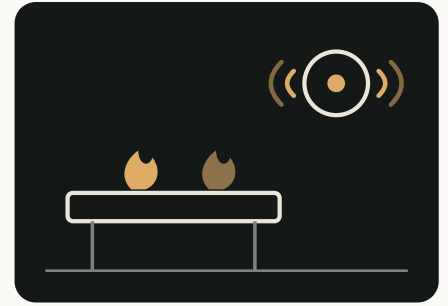

Cool the bedroom before you reach home.

Security cameras

Watch your gate and home live, with recording and alerts on your phone.

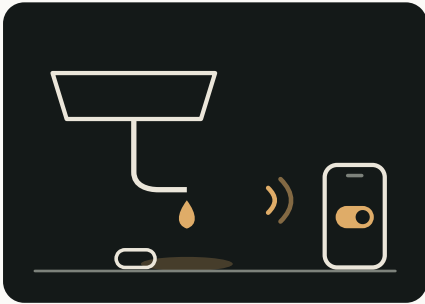

Someone at the gate? Get an alert and see who it is, from anywhere.

Gas leak alert

A loud alarm in the kitchen and an alert on your phone if gas leaks.

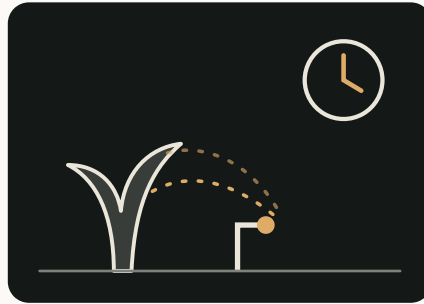

Know straight away, even when you are out.

Water leak alert

An alert when water collects under a sink or near the washing machine.

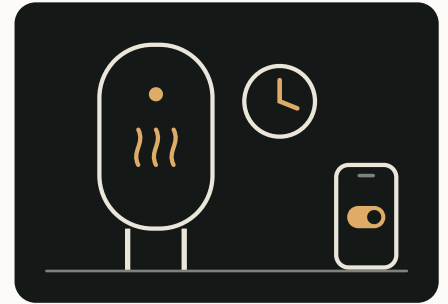

Catch a leak before it reaches the floor.

Garden watering

Water your plants on a schedule you set from your phone.

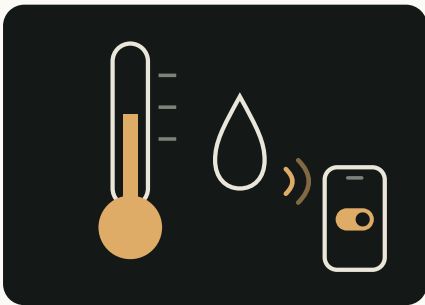

The plants get watered while you are away.

Geyser

Switch the geyser on from bed, or on a timer, with the right switchgear.

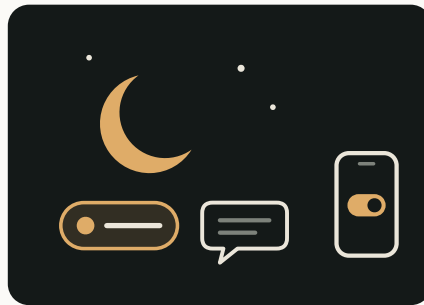

Warm water ready when you get up.

Temperature and humidity

See how warm or humid a room is, from anywhere.

Check on the baby's room from the living room.

Scenes and voice

One tap sets several things together, like "Good night" or "Leaving home". Works with Alexa and Google.

"Leaving home" switches everything off and the motor too.

10

things we can make smart in a single room

Every light

Every fan

Fan speed

Exhaust fan

Light brightness

Lights that turn on by themselves

Curtains

Air conditioner

TV

Temperature & humidity

And around your home

Water motor

Water leak alert

Scenes & voice

Security cameras

Garden watering

Gas leak alert

Geyser

Let's plan your home.

Tell us which rooms you want to start with. We will visit and suggest what makes sense.
